

LEAD THE PARADE — to an improved bottom line for your custom business!

LEAD THE PARADE — to an improved bottom line for your custom business!

A new wave is pushing it's way across the canola fields of North America—are you surfing or just watching?

A new wave is pushing it's way across the canola fields of North America—are you surfing or just watching?

A new opportunity

If you have a custom spray business that uses high clearance equipment, this profit opportunity will interest you. The new Yield Shield canola harvest system can now be mounted on many high clearance sprayers. Ag Shield has developed a front 3 point hitch kit that mounts to your high clearance sprayer. Instant Canola pusher!

Be the leader

Custom pushing is in demand. With a new technique, many folks want to do 1 or 2 fields before they commit to capital spending. If you're in the custom spray business you already know who needs this new service. Give your customers another reason to work with you.

Make extra profits

Check the rates for custom swathing canola in your area. Last year custom pushing traded for about the same money. Most operators averaged about 20 acres per hour on a fifteen to twenty day season.

Fill a slow time

At most locations, the prime window for the Yield Shield occurs when there's not much else happening at your dealership. The floors are clean, and the rigs are serviced. Can you think of more profitable way to prevent boredom?

No complications

Pushing canola is a straightforward operation. There is no complicated chemistry to learn. You'll be doing a great job almost immediately.

Check it out

Contact your Ag Shield dealer or rep today, or call the factory at 1-800-561-0132. We'll be happy to get the complete video and info package on it's way to you immediately.

Yield shield in operation. Canola is pushed about 2 weeks earlier than swathing.

We can easily set you up to push canola this summer

Complete setups

Ag Shield 3 point kits for high clearance machines include everything you need to go straight to the field. The wiring harnesses, hydraulic hoses and fittings, and installation manual let you bolt it on and go to work.

Low power requirements

The Yield shield doesn't need a lot of power to do the job. A ninety horse tractor will do the work. This isn't going to strain your machine. In fact, it might think it went on vacation for two or three weeks.

Reasonable load

A complete 30 foot Yield Shield

weighs approximately 2200 lb, and the add-on three point is about 475 lb depending on the tractor. This load is similar to the nose weights on the Deere 4710 or the boom on the Nitro, and the machines seem to handle it well.

Durable machine

The simple design almost eliminates maintenance. Last season was the first year, and there were no mechanical failures on 15 units.

Versatile

No pictures yet, but hitch kits for Willmar Eagles & Rogators are also available.

Ag Shield front 3 point hitch assembly for the John Deere 4710

John Deere 4710 with 30 ft. Yield Shield – booms remaining mounted

Miller Nitro 275 carrying a Yield Shield on a custom adapter kit.

Want to be pushy, but you don't have a high clearance rig?

If you don't have a high clearance machine but you want to push canola, Ford –Versatlie bidirectionals tractors work well. Another alternative is to mount a front 3 point kit on a conventional tractor that you own or rent. In the past couple of years Valmet has introduced a pivot seat model, and Fendt has been demonstrating units with a standard front 3 point.
