

# CROSS AUGERS

For Pulses and Canola, Harvest with all Models of Draper Headers

## Pay for themselves in less than a season!

### **In Canola:**

Harvest an extra 250 acres (750 total) in the same time it takes to do 500 without Augers  
250 acres of increased productivity at \$25 per acre pays for a \$6000 Cross Auger Investment

### **In Peas:**

Harvest an extra 250 acres (500 total) in the same time it takes to do 250 without Augers  
250 acres of increased productivity at \$25 per acre pays for a \$6000 Cross Auger Investment

"We installed Ag Shield Cross Augers on our 40 ft MacDon FD75 headers and more than doubled our forward speed in the same lodged canola fields." Chad Haugen - Custom Harvester - Dazey, ND

Save time with the ability to harvest lodged crop leaning towards AND away from the header

## Harvest More Crop Faster

## Angled Stripper Bar:

Only Ag Shield includes a Patent Pending Angled stripper bar with every Cross Auger kit

Angled stripper bar deflects crop into the auger flighting and promotes the fastest flow of crop

"I replaced my Deere built cross auger with an Ag Shield built auger so that my 5th harvester could keep up with the 4 Ag Shield auger equipped combines" — Jeff Prosko

## Full Length Auger:

Move lodged crop from the ends to the center of the header

Augers are mounted low to carry crop to the center and force crop into the drum auger fingers

Increase yield by blocking lodged crops from passing over the top of the header

When Swathing, increase speeds while improving the shape of the swath

## Center Paddles:

45 Degree swept back unloading paddles push crop into the bullet or finger auger. Competing augers with straight paddles will wrap crop on the auger

Paddles removed on left auger to leave a smooth surface for optimal use in all conditions

## SPECIFICATIONS

- Lower short line price with long line OEM quality
- Auger kits for all makes, models, and lengths of swather and combine headers
- Augers are 6"OD pipe with a full 3" high flighting, coarser 16" pitch allows reduced rpm, and ELIMINATES wrapping IN ALL CONDITIONS
- Hydraulic Driven augers with independent motor speed control
- Complete bolt on kits make for fast installs on all models
- Urethane paint shines for 7 years, like the rest of your new harvester!
